DETAILED ACTION

Status of Claims

1. Claims 1-24 are ready for examination.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

((e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1, 2, 6, 14-16 and 22-24 are rejected under 35 U.S.C. 102(e) as being anticipated by Bleck et al. (US 5,980,706 A).
4. In regards to claim(s) 1, 2, 6 and 14-16, Bleck discloses a cell to electroplate semiconductor wafers comprising a receptacle capable of holding electrolyte, a wafer chuck assembly with a first actuator assembly configured to translate the wafer chuck assembly between a first position and a second position in the claimed configuration, as well as second and third actuator assemblies capable of the claimed vertical, horizontal and rotational movements (Table 1, Figs. 1-5 and 15).
5. In regards to claim(s) 22-24, Bleck discloses a method of operating a cell with the translations in the horizontal, vertical and rotational positions as stated above (col. 3, line 9 to col. 13, line 10).

Claim Rejections - 35 USC § 103

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

7. Claims 3-4, 5, 7-13 and 17-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bleck et al. as stated above, and in view of Hanson et al. (US 6,091,498 A).

8. In regards to claim(s) 3-4, 5, 7-13 and 17-21, Bleck et al. does not explicitly disclose a first or a second guide rail or the equipment associated with guide rails wherein translation occurs along the guide rail.

9. Hanson et al. pertains to semiconductor processing. Hanson et al. discloses guide rails that translate both vertically and horizontally and with the claimed actuation motions, brackets, shafts, motors, rods, springs, pneumatics and bushings in the claimed configurations (col. 9, line 51 to col. 14, line 29). It would have been obvious to one of ordinary skill in the art to modify Bleck et al.'s system with Hanson et al.'s semiconductor guide rail equipment because Hanson et al. teaches that such equipment is effective to transport semiconductor wafers (Hanson et al., col. 9, lines 52-59).
